

DEPARTMENT OF ECONOMICS

Economics is a broad field that aims to understand why the world works as it does and how government and other interventions might affect well-being. The field is diverse methodologically, encompassing mathematical modeling, data science, and randomized trials as appropriate. It interacts both with other social sciences, as with political science and psychology in the attempt to better understand government and individual behavior, and with the sciences, as with statistics and computer science in developing data analysis techniques.

Economics studies decision-making at the individual level and the aggregate outcomes that result when individuals, firms, institutions and governments interact. It remains concerned with classic topics, such as the causes of business cycles, the effects of industry regulations, and the consequences of tax policies, but also focuses on the diverse social challenges of the developed and developing world: poverty, education, health, the environment, and inequality.

The Department of Economics offers subjects at multiple levels in the three core areas of the discipline—microeconomic theory, macroeconomics, and econometrics—and specialized subjects in many applied fields, including development economics, environmental economics, health economics, industrial organization, international trade, labor economics, political economy, and public finance.

The department offers several undergraduate programs that prepare students for careers in business, finance, consulting, law and public policy, and for further study. Its doctoral program is frequently ranked as the best in the world.

Undergraduate Study

Bachelor of Science in Economics (Course 14-1)

Course 14-1, leading to the Bachelor of Science in Economics (<https://catalog.mit.edu/degree-charts/economics-course-14>), provides students with a breadth and depth of training in economics that is unusual at the undergraduate level. It combines training in technical economics with in-depth exploration of students' areas of interest. Students choose from a diverse set of upper-level undergraduate subjects and are encouraged to engage in independent research.

The aims of the SB in Economics degree program are threefold: to give students a firm grounding in economic theory and data analysis, to develop in-depth knowledge of particular economic issues, and to develop students' capabilities for independent research. These aims correspond roughly to the requirements in the Course 14-1 program of theory, statistics and econometrics, electives, and research.

The requirements allow substantial freedom for students in designing individual programs within economics and in balancing the program with subjects in other disciplines. The ample elective

slots let students apply their technical skills to develop a deep understanding of whatever interests them, whether that is poverty in developing countries, international trade, game theory, for example. The department recommends that students interested in graduate work in economics build their technical skills with additional subjects in mathematics and computer science. Students can also complement their studies in the major with subjects in political science, history, and other social sciences.

The major is sufficiently flexible that students can transfer into the major or add it as a second major without having taken courses beyond 14.01 Principles of Microeconomics and 14.02 Principles of Macroeconomics in the first two years. Students typically complete an intermediate micro subject, 14.05 Intermediate Macroeconomics, 14.30 Introduction to Statistical Methods in Economics, and 14.32 Econometric Data Science by the third year. This satisfies the prerequisites for all subjects (including 14.33 Research and Communication in Economics: Topics, Methods, and Implementation) and prepares students for research on their thesis and in other elective subjects.

Bachelor of Science in Mathematical Economics (Course 14-2)

The SB in Mathematical Economics (<https://catalog.mit.edu/degree-charts/mathematical-economics-course-14-2>) is designed for students who desire a deeper mathematical foundation and allows them to concentrate in a subset of economics topics. This program is well suited to students interested in mathematical microeconomic theory or econometrics. Students will gain the strong mathematical and theoretical preparation needed for subsequent graduate study in economics.

Students majoring in Mathematical Economics start with the same introductory micro and macro courses as 14-1 majors. They go on to take a program that includes rigorous mathematical training in microeconomic theory and econometrics, and substantial coursework in mathematics, including 18.100x Real Analysis, a choice between 18.06 Linear Algebra or 18.03 Differential Equations, and at least one mathematics seminar.

Bachelor of Science in Computer Science, Economics, and Data Science (Course 6-14)

The Department of Electrical Engineering and Computer Science (<https://catalog.mit.edu/schools/engineering/electrical-engineering-computer-science>) and the Department of Economics (p. 3) offer a joint curriculum leading to a Bachelor of Science in Computer Science, Economics and Data Science (Course 6-14) (<https://catalog.mit.edu/degree-charts/computer-science-economics-data-science-course-6-14>). The interdisciplinary major provides students a portfolio of skills in economics, computing, and data science that are increasingly valued in both the business world and academia. The economics and computer science disciplines have a substantial overlap both in their reliance on game theory and mathematical modeling techniques and their use of data analytics. The economics side of the program

includes subjects in microeconomic theory and econometrics and electives that expose students to how economists in various fields use mathematical models and statistical evidence to think about problems. The computer science side includes a number of subjects that develop complementary knowledge, including the study of algorithms, optimization, and machine learning (which is increasingly integrated with econometrics). The program also includes coursework in several mathematical subjects, including linear algebra, probability, discrete mathematics, and statistics, which can be taken in various departments.

The Course 6-14 major is also well suited to students whose primary interest is in game theory and mathematical modeling. It can prepare students for graduate study in either discipline.

Minor in Economics

The objective of the minor is to extend the understanding of economic issues beyond the level of the concentration. This is done through specialized analytical subjects and elective subjects that provide an extensive treatment of economic issues in particular areas.

The Minor in Economics consists of six subjects arranged into three levels of study:

Tier I		
14.01	Principles of Microeconomics ¹	12
14.02	Principles of Macroeconomics ¹	12
14.30	Introduction to Statistical Methods in Economics	12
or 18.05	Introduction to Probability and Statistics	
Tier II		
Select one of the following:		12
14.03	Microeconomic Theory and Public Policy	
14.04	Intermediate Microeconomic Theory	
14.05	Intermediate Macroeconomics	
Tier III		
Select two elective subjects in applied economics. ²		24
Total Units		72

¹ Under no circumstances may a student complete a minor with fewer than six subjects. Any student who receives permission from the Economics Department to skip 14.01 and/or 14.02 in order to take a higher-level subject must take a replacement subject for each subject that is skipped.

² See the department's website for a list of available subjects (<http://economics.mit.edu/under/minors>).

Inquiries

For more information regarding admissions or financial aid (evako@mit.edu), contact Julia Martyn-Shah, 617-253-8787. For undergraduate admissions and academic programs (gking@mit.edu), contact Gary King, 617-253-0951. For any

other information, (memiller@mit.edu) contact Megan Miller, 617-253-3807.

Graduate Study

Admission Requirements for Graduate Study

The Department of Economics specifies the following prerequisites for graduate study in economics: one full year of college mathematics and an appreciable number of professional subjects in economics for those qualified students who have majored in fields other than economics. Applicants for admission who have deficiencies in entrance requirements should consult with the department about programs to remedy such deficits.

Master of Science in Economics

In unusual circumstances, admission may be granted to current MIT students seeking the Master of Science degree. The general requirements for the SM (<https://catalog.mit.edu/mit/graduate-education/general-degree-requirements/#mastersdegreertext>) are given in the section on Graduate Education.

Master of Applied Science in Data, Economics, and Design of Policy

The Master of Applied Science in Data, Economics, and Design of Policy (<https://catalog.mit.edu/degree-charts/master-applied-data-economics-development-policy>) is an intensive program consisting of a series of nine subjects plus a capstone experience (a summer internship and a corresponding project report). Students gain a strong foundation in microeconomics, development economics, probability, and statistics; engage with cutting-edge research; and develop practical skills in data analysis and the evaluation of social programs. Student choose between two tracks: International Development (focused on low- and middle-income contexts) and Public Policy (focused on high-income contexts). Only students who have successfully completed the MITx MicroMasters (<https://micromasters.mit.edu/dedp>) credential in Data, Economics, and Design of Policy in the corresponding track are eligible to apply to the on-campus master's program.

Email for more information (dedp_masters@povertyactionlab.org) or visit the website (<https://economics.mit.edu/masters>).

Master of Engineering in Computer Science, Economics, and Data Science

The Department of Electrical Engineering and Computer Science and the Department of Economics offer a joint curriculum leading to a Master of Engineering in Computer Science, Economics, and Data Science (<https://catalog.mit.edu/degree-charts/master-computer-science-economics-data-science-course-6-14-p>). Computer science and data science provide tools for problem solving, and economics applies those tools to domains where there is rapidly growing intellectual, scholarly, and commercial interest, such as online markets, crowdsourcing platforms, spectrum auctions,

financial platforms, crypto currencies, and large-scale matching/ allocation systems such as kidney donation and public school choice systems. This joint program prepares students for jobs in economics, management consulting, and finance. Students in the program are full members of both departments, with a single advisor chosen from EECS or Economics based on interests of the student as well as the advisor's interest and expertise in the 6-14 area.

The Master's of Engineering in Computer Science, Economics, and Data Science (Course 6-14P) builds on the foundation provided by the Bachelor of Science in Computer Science, Economics, and Data Science (Course 6-14) (<https://catalog.mit.edu/degree-charts/computer-science-economics-data-science-course-6-14>) to provide both advanced classwork and master's-level thesis work. The student selects (with departmental review and approval) 42 units of advanced graduate subjects, which include two subjects in economics and two subjects in electrical engineering and computer science. A further 24 units of electives are chosen from a restricted departmental list of math electives.

The Master of Engineering degree also requires 24 units of thesis credit. While a student may register for more than this number of thesis units, only 24 units count toward the degree requirement.

Programs leading to the five-year Master of Engineering degree or to the four-year Bachelor of Science degree can be arranged to be identical through the junior year. At the end of the junior year, students with a strong academic record will be offered the opportunity to continue through the five-year master's program. A student in the Master of Engineering program must be registered as a graduate student for at least one regular (non-summer) term. To remain in the program and to receive the Master of Engineering degree, students will be expected to maintain a strong academic record. Admission to the Master of Engineering program is open only to undergraduate students who have completed their junior year in the Course 6-14 Bachelor of Science program.

Financial Support

The fifth year of study toward the Master of Engineering degree can be supported by a combination of personal funds, a fellowship, or a graduate assistantship. Assistantships require participation in research or teaching in the department or in one of the associated laboratories. Full-time assistants may register for no more than two scheduled classroom or laboratory subjects during the term, but may receive academic credit for their participation in the teaching or research program. Support through an assistantship may extend the period required to complete the Master of Engineering program by an additional term or two. Support is granted competitively to graduate students and will not be available for all of those admitted to the Master of Engineering program. If provided, department support for Master of Engineering candidates is normally limited to the first three terms as a graduate student unless the Master of Engineering thesis has been completed, the student has served as a teaching

assistant, or the student has been admitted to the doctoral program, in which cases a fourth term of support may be permitted.

Inquiries

For additional information regarding teaching and research programs, contact the EECS Undergraduate Office, Room 38-476, 617-253-4654, or visit the department's website (<https://www.eecs.mit.edu/academics/undergraduate-programs/meng-program>).

Doctor of Philosophy

The Department of Economics offers a Doctor of Philosophy (PhD) in Economics (<https://catalog.mit.edu/degree-charts/phd-economics>). Students in the doctoral program complete a course of study involving a series of required core subjects in microeconomic theory, macroeconomics, and econometrics; coursework (with a grade of B or better) in two major and two minor fields of study from among those offered by the department; a research paper; and a thesis. The coursework and research paper, completed in the program's first two years, culminate in a general examination. The four fields of study are chosen from advanced economic theory; computation and statistics (minor field only); econometrics; economic development; finance; industrial organization; international economics; labor economics; monetary economics; organizational economics; political economy; and public economics.

Following successful completion of the general examination requirement, the student forms a thesis committee of two or three faculty members. The thesis must meet high professional standards and make a significant original contribution to the student's chosen research area. The thesis must be approved by the thesis committee and then by an independent faculty member in the department selected by the chair of the Graduate Committee. Upon successful completion of the program, students are awarded the PhD in economics.

There is no required minimum number of graduate subjects in the department. Students must be in residence for a minimum of two years. However, candidates ordinarily need two full academic years of study to complete the core and field of study requirements, and the doctoral thesis typically requires three to four years of additional research effort.

Interdisciplinary Program

Economics and Statistics

The Interdisciplinary Doctoral Program in Statistics provides training in statistics, including classical statistics and probability as well as computation and data analysis, to students who wish to integrate these valuable skills into their primary academic program. The program is administered jointly by the departments of Aeronautics and Astronautics, Economics, Mathematics, Mechanical Engineering, Physics, and Political Science, and the Statistics and Data Science Center within the Institute for Data, Systems, and Society. It is open

to current doctoral students in participating departments. For more information, including department-specific requirements, see the full program description (<https://catalog.mit.edu/interdisciplinary/graduate-programs/phd-statistics>) under Interdisciplinary Graduate Programs.

Financial Support

Many doctoral students are supported by scholarship and fellowship grants, as well as by teaching and research assistantships.

General Economics and Theory

14.00 Undergraduate Internship in Economics

Prereq: Permission of instructor
U (IAP, Summer)
Units arranged [P/D/F]
Can be repeated for credit.

For Course 14 students participating in off-campus internship experiences in economics. Before registering for this subject, students must have an employment offer from a company or organization and must identify a Course 14 advisor. Upon completion of the internship, student must submit a letter from the employer describing the work accomplished, along with a substantive final report from the student approved by the MIT advisor. Subject to departmental approval. Consult departmental undergraduate office.
Consult D. Donaldson

14.000 Graduate Internship in Economics

Prereq: Permission of instructor
G (IAP, Summer)
Units arranged [P/D/F]
Can be repeated for credit.

For Course 14 students participating in off-campus internship experiences in economics. Before registering for this subject, students must have an employment offer from a company or organization and must identify a Course 14 advisor. Upon completion of the internship, student must submit a letter from the employer describing the work accomplished, along with a substantive final report from the student approved by the MIT advisor. Subject to departmental approval. Consult departmental graduate office.
Consult I. Andrews

14.001 Data Economics and Development Policy Summer Internship

Prereq: Permission of department
G (Fall, Spring, Summer)
0-1-0 units

Provides students in the DEDP Master's program the opportunity to synthesize their coursework and professional experience in development economics and data analysis. In the context of a summer internship, students apply the knowledge gained in the program towards a project with a host organization, typically in the development sector. Students will be supported in finding a suitable opportunity or research project. All internship placements are subject to approval by the program director. Each student must write a capstone project report. Restricted to DEDP MASc students.
S. Ellison

14.003 Microeconomic Theory and Public Policy

Subject meets with 14.03
Prereq: 14.01 or permission of instructor
G (Fall, Spring)
4-0-8 units

Students master and apply economic theory, causal inference, and contemporary evidence to analyze policy challenges. These include the effect of minimum wages on employment, the value of healthcare, the power and limitations of free markets, the benefits and costs of international trade, the causes and remedies of externalities, the consequences of adverse selection in insurance markets, the impacts of labor market discrimination, and the application of machine learning to supplement to decision-making. Class attendance and participation are mandatory. Students taking graduate version complete additional assignments.
Consult D. Autor, S. Jaeger

14.009 Economics and Society's Toughest Problems

Prereq: None

Acad Year 2024-2025: Not offered

Acad Year 2025-2026: U (Fall)

1-0-2 units

Should we trade more or less with China? Why are some countries poor, and some countries rich? Why are the 1% getting richer? Should the US have a universal basic income? Why is our society becoming so polarized? What can we do to mitigate climate change? Will robots take all the jobs? Why does racism persist and how can we fight it? What will the world economy look like after the COVID-19 recession? Economics shows you how to think about some of the toughest problems facing society — and how to use data to get answers. Features lectures by MIT's economics faculty, showing how their cutting-edge research can help answer these questions. In lieu of problem sets, quizzes, or other written assignments, students produce materials of their choice (podcasts, TikToks, longer videos) with the view to make a potential audience excited about economics. Subject can count toward the 6-unit discovery-focused credit limit for first-year students.

*E. Duflo***14.01 Principles of Microeconomics**

Prereq: None

U (Fall, Spring)

3-0-9 units. HASS-S

Introduces microeconomic concepts and analysis, supply and demand analysis, theories of the firm and individual behavior, competition and monopoly, and welfare economics. Applications to problems of current economic policy.

*Consult N. Agarwal, D. Donaldson, S. Ellison, J. Gruber***14.02 Principles of Macroeconomics**

Prereq: None

U (Fall, Spring)

3-0-9 units. HASS-S

Provides an overview of macroeconomic issues including the determination of national income, economic growth, unemployment, inflation, interest rates, and exchange rates. Introduces basic macroeconomic models and illustrates key principles through applications to the experience of the US and other economies. Explores a range of current policy debates, such as the economic effects of monetary and fiscal policy, the causes and consequences of the 2008 global financial crisis, and the factors that influence long-term growth in living standards. Lectures are recorded and available for students with scheduling conflicts.

*M. Beraja, R. Caballero, J. Poterba***14.03 Microeconomic Theory and Public Policy**

Subject meets with 14.003

Prereq: 14.01 or permission of instructor

U (Fall, Spring)

4-0-8 units. HASS-S

Students master and apply economic theory, causal inference, and contemporary evidence to analyze policy challenges. These include the effect of minimum wages on employment, the value of healthcare, the power and limitations of free markets, the benefits and costs of international trade, the causes and remedies of externalities, the consequences of adverse selection in insurance markets, the impacts of labor market discrimination, and the application of machine learning to supplement to decision-making. Class attendance and participation are mandatory. Students taking graduate version complete additional assignments.

*Consult D. Autor, S. Jaeger***14.04 Intermediate Microeconomic Theory**

Prereq: Calculus II (GIR) and 14.01

U (Fall)

4-0-8 units. HASS-S

Analysis of consumer and producer decisions including analysis of competitive and monopolistic markets. Price-based partial and general equilibrium analysis. Introduction to game theory as a foundation for the strategic analysis of economic situations. Imperfect competition, dynamic games among firms. Failures of general equilibrium theory and their resolutions: externalities, public goods, incomplete information settings, signaling, screening, insurance, alternative market mechanisms, auctions, design of markets.

*S. Morris***14.05 Intermediate Macroeconomics**

Prereq: 14.01 and (14.02 or permission of instructor)

U (Fall)

4-0-8 units. HASS-S

Uses the tools of macroeconomics to investigate various macroeconomic issues in depth. Topics range from economic growth and inequality in the long run to economic stability and financial crises in the short run. Surveys many economic models used today. Requires a substantial research paper on the economics of long-run economic growth.

C. Wolf

14.06 Advanced Macroeconomics

Prereq: 14.01 and 14.02

U (Fall)

Not offered regularly; consult department

4-0-8 units. HASS-S

Blends a thorough study of the theoretical foundations of modern macroeconomics with a review of useful mathematical tools, such as dynamic programming, optimal control, and dynamic systems. Develops comfort with formal macroeconomic reasoning and deepens understanding of key macroeconomic phenomena, such as business cycles. Goes on to study more specific topics, such as unemployment, financial crises, and the role of fiscal and monetary policy. Special attention to reviewing relevant facts and disentangling them from their popular interpretations. Uses insights and tools from game theory. Includes applications to recent and historical events.

Consult Department Headquarters

14.08 Technical Topics in Economics

Prereq: 14.01

U (Fall, Spring)

4-0-8 units

Can be repeated for credit.

Considers technical issues of current research interest in economics.

Consult Department Headquarters

14.09 Reading Seminar in Economics

Prereq: 14.04 and 14.06

U (Fall, IAP, Spring, Summer)

Units arranged [P/D/F]

Can be repeated for credit.

Reading and discussion of particular topics in economics. Open to undergraduate students by arrangement with individual faculty members. Consult Department Headquarters.

D. Donaldson

14.10 Reading Seminar in Economics

Prereq: 14.04 and 14.06

U (Fall, IAP, Spring, Summer)

Units arranged

Can be repeated for credit.

Reading and discussion of particular topics in economics. Open to undergraduate students by arrangement with individual faculty members. Consult Department Headquarters.

D. Donaldson

14.11 Topics in Economics

Prereq: 14.01

U (Fall)

Not offered regularly; consult department

4-0-8 units. HASS-S

Can be repeated for credit.

Considers issues of current research interest in economics.

Consult Department Headquarters

14.12 Economic Applications of Game Theory

Prereq: 14.01 and (6.041B, 14.04, 14.30, 18.05, or permission of instructor)

U (Fall)

4-0-8 units. HASS-S

Analysis of strategic behavior in multi-person economic settings. Introduction to solution concepts, such as rationalizability, backwards induction, Nash equilibrium, subgame-perfect equilibrium, and sequential equilibrium. Strong emphasis on dynamic games, such as repeated games. Introduction to Bayesian games, focusing on Bayesian Nash Equilibrium, Perfect Bayesian Equilibrium, and signaling games. Applications drawn from microeconomics: imperfect competition, implicit cartels, bargaining, and auctions.

I. Ball

14.121 Microeconomic Theory I

Prereq: 14.04 and permission of instructor

G (Fall; first half of term)

3-0-3 units

Covers consumer and producer theory, markets and competition, general equilibrium and the welfare theorems; featuring applications, uncertainty, identification and restrictions models place on data. Enrollment limited; preference to PhD students.

P. Pathak

14.122 Microeconomic Theory II

Prereq: 14.121 and permission of instructor

G (Fall; second half of term)

3-0-3 units

Introduction to game theory. Topics include normal form and extensive form games, and games with incomplete information. Enrollment limited.

G. Ellison

14.123 Microeconomic Theory III

Prereq: 14.121, 14.122, and permission of instructor

G (Spring; first half of term)

3-0-3 units

Models of individual decision-making under certainty and uncertainty. Additional topics in game theory. Enrollment limited.

*D. Fudenberg***14.124 Microeconomic Theory IV**

Prereq: 14.123 or permission of instructor

G (Spring; second half of term)

3-0-3 units

Introduction to statistical decision theory, incentive contracting (moral hazard and adverse selection), mechanism design and incomplete contracting. Enrollment limited.

*A. Wolitzky***14.125 Market Design**

Prereq: 14.124

G (Spring)

4-0-8 units

Theory and practice of market design, building on ideas from microeconomics, game theory and mechanism design. Prominent case studies include auctions, labor markets, school choice, prediction markets, financial markets, and organ exchange clearinghouses.

*N. Agarwal, P. Pathak***14.126 Game Theory**

Prereq: 14.122

G (Spring)

3-0-9 units

Investigates equilibrium and non-equilibrium solution concepts and their foundations as the result of learning or evolution. Studies the equilibria of supermodular games, global games, repeated games, signaling games, and models of bargaining, cheap talk, and reputation.

*D. Fudenberg, A. Wolitzky, M. Yildiz***14.127 Advanced Game Theory**

Prereq: None

G (Fall)

4-0-8 units

For students who plan to do game theory research. Covers the following topics: epistemic foundations of game theory, higher order beliefs, the role and status of common prior assumptions, social networks and social learning, repeated and stochastic games, non-equilibrium learning, stochastic stability and evolutionary dynamics, game theory experiments, and behavioral game theory.

*D. Fudenberg, M. Yildiz***14.129 Advanced Contract Theory**

Prereq: 14.121, 14.281, or permission of instructor

G (Spring; first half of term)

3-0-3 units

Presents the contract theory, mechanism design, and general equilibrium theory necessary for an understanding of a variety of recent innovations: crypto currencies, digital assets; intermediation through digital big techs; central bank digital currency; and decentralized finance (DeFi) versus centralized exchange and contract platforms. Three broad themes: 1) Take stock of new technologies' characteristic features (distributed ledgers and blockchain, e-transfers, smart contracts, and encryption); 2) Translate these features into formal language; 3) Inform normative questions: Should we delegate programmable contracts to the private sector and the role of public authorities.

*Consult R. Townsend***14.13 Psychology and Economics**

Subject meets with 14.131

Prereq: 14.01

U (Spring)

4-0-8 units. HASS-S

Introduces the theoretical and empirical literature of behavioral economics. Examines important and systematic departures from the standard models in economics by incorporating insights from psychology and other social sciences. Covers theory and evidence on time, risk, and social preferences; beliefs and learning; emotions; limited attention; and frames, defaults, and nudges. Studies applications to many different areas, such as credit card debt, procrastination, retirement savings, addiction, portfolio choice, poverty, labor supply, happiness, and government policy. Students participate in surveys and experiments in class, review evidence from lab experiments, examine how the results can be integrated into models, and test models using field and lab data. Students taking graduate version complete additional assignments.

F. Schilbach

14.130 Reading Economic Theory

Prereq: 14.121 and 14.451

G (Fall)

2-0-10 units

Can be repeated for credit.

Class will read and discuss current research in economic theory with a focus on game theory, decision theory, and behavioral economics. Students will be expected to make one presentation and to read and post comments on every paper by the day before the paper is presented. Permission of the instructor required, and auditors are not allowed.

D. Fudenberg

14.131 Psychology and Economics

Subject meets with 14.13

Prereq: 14.01

G (Spring)

4-0-8 units

Introduces the theoretical and empirical literature of behavioral economics. Examines important and systematic departures from the standard models in economics by incorporating insights from psychology and other social sciences. Covers theory and evidence on time, risk, and social preferences; beliefs and learning; emotions; limited attention; and frames, defaults, and nudges. Studies applications to many different areas, such as credit card debt, procrastination, retirement savings, addiction, portfolio choice, poverty, labor supply, happiness, and government policy. Students participate in surveys and experiments in class, review evidence from lab experiments, examine how the results can be integrated into models, and test models using field and lab data. Students taking graduate version complete additional assignments.

F. Schilbach

14.137[[]] Psychology and Economics

Same subject as 9.822[[]]

Prereq: None

G (Spring)

4-0-8 units

Examines "psychology appreciation" for economics students. Aims to enhance knowledge and intuition about psychological processes in areas relevant to economics. Increases understanding of psychology as an experimental discipline, with its own distinct rules and style of argument. Topics include self-knowledge, cognitive dissonance, self-deception, emotions, social norms, self-control, learning, mental accounting, memory, individual and group behavior, and some personality and psycho-analytic models. Within each of these topics, we showcase effective and central experiments and discuss their role in the development of psychological theory. Term paper required.

D. Prelec

14.147 Topics in Game Theory

Prereq: 14.126

Acad Year 2024-2025: Not offered

Acad Year 2025-2026: G (Fall)

4-0-8 units

Advanced subject on topics of current research interest.

D. Fudenberg

14.15[[]] Networks

Same subject as 6.3260[[]]

Subject meets with 14.150

Prereq: 6.3700 or 14.30

U (Spring)

4-0-8 units. HASS-S

Highlights common principles that permeate the functioning of diverse technological, economic and social networks. Utilizes three sets of tools for analyzing networks -- random graph models, optimization, and game theory -- to study informational and learning cascades; economic and financial networks; social influence networks; formation of social groups; communication networks and the Internet; consensus and gossiping; spread and control of epidemics; control and use of energy networks; and biological networks. Students taking graduate version complete additional assignments.

A. Wolitzky

14.150 Networks

Subject meets with 6.3260[[]], 14.15[[]]

Prereq: 6.3700 or 14.300

G (Spring)

4-0-8 units

Highlights common principles that permeate the functioning of diverse technological, economic and social networks. Utilizes three sets of tools for analyzing networks -- random graph models, optimization, and game theory -- to study informational and learning cascades; economic and financial networks; social influence networks; formation of social groups; communication networks and the Internet; consensus and gossiping; spread and control of epidemics; control and use of energy networks; and biological networks. Students taking graduate version complete additional assignments.

A. Wolitzky

14.16 Strategy and Information

Subject meets with 14.161

Prereq: 14.01 or permission of instructor

U (Spring)

4-0-8 units. HASS-S

Covers modern applications of game theory where incomplete information plays an important role. Applications include bargaining, auctions, global games, market design, information design, and network economics. Students taking graduate version complete additional assignments.

M. Yildiz

14.160 Behavioral Economics

Prereq: 14.122

G (Spring)

4-0-8 units

Covers recent theory and empirical evidence in behavioral economics. Topics include deviations from the neoclassical model in terms of (i) preferences (present bias, reference dependence, social preferences), (ii) beliefs (overconfidence, projection bias), and (iii) decision-making (cognition, attention, framing, persuasion), as well as (iv) market reactions to such deviations. Applications will cover a large range of fields, including labor and public economics, industrial organization, health economics, finance, and development economics.

A. Banerjee, F. Schilbach

14.161 Strategy and Information

Subject meets with 14.16

Prereq: 14.01 or permission of instructor

G (Spring)

4-0-8 units

Covers modern applications of game theory where incomplete information plays an important role. Applications include bargaining, auctions, global games, market design, information design, and network economics. Students taking graduate version complete additional assignments.

M. Yildiz

14.163 Algorithms and Behavioral Science

Prereq: (14.122 and 14.381) or permission of instructor

G (Spring)

4-0-8 units

Examines algorithms and their interaction with human cognition.

Provides an overview of supervised learning as it relates to econometrics and economic applications. Discusses using algorithms to better understand people, using algorithms to improve human judgment, and using understanding of humans to better design algorithms. Prepares economics PhD students to conduct research in the field.

S. Mullainathan, A. Rambachan

14.18 Mathematical Economic Modeling

Prereq: 14.04, 14.12, 14.15[)], or 14.19

U (Spring)

4-0-8 units. HASS-S

Guides students through the process of developing and analyzing formal economic models and effectively communicating their results. Topics include decision theory, game theory, voting, and matching. Instruction and practice in oral and written communication provided. Prior coursework in microeconomic theory and/or proof-based mathematics required. Limited to 18 students.

M. Yildiz

14.19 Market Design

Prereq: 14.01

U (Fall)

4-0-8 units. HASS-S

Covers the design and operation of organized markets, building on ideas from microeconomic and game theory. Topics may include mechanism design, auctions, matching markets, and other resource allocation problems.

P. Pathak

14.191 Independent Research Paper

Prereq: Permission of instructor

G (Fall, IAP, Spring, Summer)

0-12-0 units

Can be repeated for credit.

Under guidance from a faculty member approved by Graduate Registration Officer, student writes a substantial, probably publishable research paper. Must be completed by the end of a student's second year to satisfy the departmental minor requirement.

Staff

14.192 Advanced Research and Communication

Prereq: 14.124, 14.382, and 14.454

G (Fall, IAP, Spring)

2-4-6 units

Can be repeated for credit.

Guides second-year Economics PhD students through the process of conducting and communicating economic research. Students choose topics for research projects, develop research strategies, carry out analyses, and write and present research papers. Limited to second year Economics PhD students.

Consult Department Headquarters

14.193 Advanced Seminar in Economics

Prereq: 14.121 and 14.451

G (Fall, Spring, Summer; first half of term)

Units arranged

Can be repeated for credit.

Reading and discussion of current topics in economics. Open to advanced graduate students by arrangement with individual members of the staff.

Consult Department headquarters

14.195 Reading Seminar in Economics

Prereq: 14.121

G (Fall, Spring, Summer)

Units arranged [P/D/F]

Can be repeated for credit.

Reading and discussion of current topics in economics. Open to advanced graduate students by arrangement with individual members of the staff.

Staff

14.197 Independent Research

Prereq: None

G (Fall, IAP, Spring, Summer)

Units arranged [P/D/F]

Can be repeated for credit.

Under guidance from a faculty member approved by Graduate Registration Officer, student conducts independent research.

Staff

14.198, 14.199 Teaching Introductory Economics

Prereq: None

G (Fall, Spring)

2-0-2 units

Can be repeated for credit.

Required of teaching assistants in introductory economics (14.01 and 14.02), under guidance from the faculty member in charge of the subject.

14.198: N. Agarwal, D. Donaldson 14.199: M. Beraja, R. Caballero

14.281 Contract Economics

Prereq: 14.124 or permission of instructor

G (Fall)

4-0-8 units

Covers theoretical research on contracts in static as well as dynamic settings. Topics include agency theory, mechanism design, incomplete contracting, information design and costly information acquisition.

I. Ball, S. Morris

Industrial Organization

14.20 Industrial Organization: Competitive Strategy and Public Policy

Subject meets with 14.200

Prereq: 14.01

U (Spring)

4-0-8 units. HASS-S

Analyzes the current debate over the rise of monopolies, the strategic behavior and performance of firms in imperfectly competitive markets, and the role of competition policy.

Topics include monopoly power; pricing, product choice, and innovation decisions by firms in oligopoly markets; static and dynamic measurement of market performance; and incentives in organizations. Requires regular participation in class discussion and teamwork in a competitive strategy game. Students taking graduate version complete additional assignments.

N. Rose

14.200 Industrial Organization: Competitive Strategy and Public Policy

Subject meets with 14.20

Prereq: 14.01

G (Spring)

4-0-8 units

Analyzes the current debate over the rise of monopolies, the strategic behavior and performance of firms in imperfectly competitive markets, and the role of competition policy. Topics include monopoly power; pricing, product choice, and innovation decisions by firms in oligopoly markets; static and dynamic measurement of market performance; and incentives in organizations. Requires regular participation in class discussion and teamwork in a competitive strategy game. Students taking graduate version complete additional assignments.

N. Rose

14.27 Economics and E-Commerce

Subject meets with 14.270

Prereq: 14.01 and (6.3700 or 14.30)

U (Spring)

4-0-8 units. HASS-S

Uses theoretical economic models and empirical evidence to help understand the growth and future of e-commerce. Economic models help frame class discussions of, among other topics, content provision, privacy, piracy, sales taxation, group purchasing, price search, and advertising on the internet. Empirical project and paper required. Students taking graduate version complete additional assignments.

S. Ellison

14.270 Economics and E-Commerce

Subject meets with 14.27

Prereq: 14.01 and (6.3700 or 14.30)

G (Spring)

4-0-8 units

Uses theoretical economic models and empirical evidence to help understand the growth and future of e-commerce. Economic models help frame class discussions of, among other topics, content provision, privacy, piracy, sales taxation, group purchasing, price search, and advertising on the internet. Empirical project and paper required. Students taking graduate version complete additional assignments.

S. Ellison

14.271 Industrial Organization I

Prereq: None. *Coreq: 14.122 and 14.381*

G (Fall)

5-0-7 units

Covers theoretical and empirical work dealing with the structure, behavior, and performance of firms and markets and core issues in antitrust. Topics include: the organization of the firm, monopoly, price discrimination, oligopoly, and auctions. Theoretical and empirical work are integrated in each area.

G. Ellison

14.272 Industrial Organization II

Prereq: 14.271

G (Spring)

5-0-7 units

Continuation of 14.271. Focuses on government interventions in monopoly and oligopoly markets, and addresses both competition and regulatory policy. Topics include horizontal merger policy and demand estimation, vertical integration and vertical restraints, and the theory and practice of economic regulation. Applications include the political economy of regulation; the performance of economic regulation; deregulation in sectors including electric power, transportation, and financial services; and pharmaceutical and environmental regulation in imperfectly competitive product markets.

N. Rose, M. Whinston

14.273 Advanced Topics in Industrial Organization

Prereq: 14.271

G (Spring)

5-0-7 units

Empirical analysis of theoretically derived models of market behavior. Varied topics include demand estimation, differentiated products, production functions, analysis of market power, entry and exit, vertical relationships, auctions, matching markets, network externalities, dynamic oligopoly, moral hazard and adverse selection. Discussion will focus on methodological issues, including identification, estimation, counter-factual analysis and simulation techniques.

N. Agarwal, T. Salz

Organizational Economics

14.26[[]] Organizational Economics

Same subject as 15.039[[]]

Subject meets with 14.260

Prereq: 14.01

Acad Year 2024-2025: Not offered

Acad Year 2025-2026: U (Spring)

4-0-8 units. HASS-S

Provides a rigorous, but not overly technical introduction to the economic theory of organization together with a varying set of applications. Addresses incentives, control, relationships, decision processes, and organizational culture and performance. Introduces selected fundamentals of game theory. Students taking graduate version complete additional assignments. Limited to 60.

C. Angelucci

14.260 Organizational Economics

Subject meets with 14.26[[]], 15.039[[]]

Prereq: None

Acad Year 2024-2025: Not offered

Acad Year 2025-2026: G (Spring)

4-0-8 units

Provides a rigorous, but not overly technical introduction to the economic theory of organization together with a varying set of applications. Addresses incentives, control, relationships, decision processes, and organizational culture and performance. Introduces selected fundamentals of game theory. Students taking graduate version complete additional assignments. Limited to 60.

C. Angelucci

14.282 Introduction to Organizational Economics

Prereq: 14.124

G (Fall)

5-0-7 units

Begins with survey of contract theory for organizational economists, then introduces the main areas of the field, including the boundary of the firm; decision-making, employment, structures and processes in organizations; and organizations other than firms.

C. Angelucci, R. Gibbons, N. Kala

14.283 Advanced Topics in Organizational Economics I

Prereq: 14.282

G (Spring; first half of term)

2-0-4 units

Buils on the work done in 14.282 to develop more in-depth analysis of topics in the field.

R. Gibbons

14.284 Advanced Topics in Organizational Economics II

Prereq: 14.282

G (Spring; second half of term)

2-0-4 units

Buils on the work done in 14.282 to develop more in-depth analysis of topics in the field.

C. Angelucci

Statistics and Econometrics

14.30 Introduction to Statistical Methods in Economics

Subject meets with 14.300

Prereq: Calculus II (GIR)

U (Fall)

4-0-8 units. REST

Self-contained introduction to probability and statistics with applications in economics and the social sciences. Covers elements of probability theory, statistical estimation and inference, regression analysis, causal inference, and program evaluation. Couples methods with applications and with assignments involving data analysis. Uses basic calculus and matrix algebra. Students taking graduate version complete additional assignments. May not count toward HASS requirement.

A. Abadie

14.300 Introduction to Statistical Methods in Economics

Subject meets with 14.30

Prereq: Calculus II (GIR)

G (Fall)

4-0-8 units

Self-contained introduction to probability and statistics with applications in economics and the social sciences. Covers elements of probability theory, statistical estimation and inference, regression analysis, causal inference, and program evaluation. Couples methods with applications and with assignments involving data analysis. Uses basic calculus and matrix algebra. Students taking graduate version complete additional assignments.

A. Abadie

14.310 Data Analysis for Social Scientists

Prereq: None

G (Spring)

Not offered regularly; consult department

4-0-8 units

Introduces methods for harnessing data to answer questions of cultural, social, economic, and policy interest. Presents essential notions of probability and statistics. Covers techniques in modern data analysis: regression and econometrics, prediction, design of experiment, randomized control trials (and A/B testing), machine learning, data visualization, analysis of network data, and geographic information systems. Projects include analysis of data with a written description and interpretation of results; may involve gathering of original data or use of existing data sets. Applications drawn from real world examples and frontier research. Instruction in use of the statistical package R. Students taking graduate version complete additional assignments.

*Consult E. Duflo***14.32 Econometric Data Science**

Subject meets with 14.320

Prereq: 14.30 or 18.650[J]

U (Fall, Spring)

4-4-4 units. Institute LAB

Introduces regression and other tools for causal inference and descriptive analysis in empirical economics. Topics include analysis of randomized experiments, instrumental variables methods and regression discontinuity designs, differences-in-differences estimation, and regression with time series data. Develops the skills needed to conduct — and critique — empirical studies in economics and related fields. Empirical applications are drawn from published examples and frontier research. Familiarity with statistical programming languages is helpful. Students taking graduate version complete an empirical project leading to a short paper. No listeners. Limited to 70 total for versions meeting together.

*A. Mikusheva, J. Angrist***14.320 Econometric Data Science**

Subject meets with 14.32

Prereq: 14.300 or 18.650[J]

G (Fall, Spring)

4-4-4 units

Introduces regression and other tools for causal inference and descriptive analysis in empirical economics. Topics include analysis of randomized experiments, instrumental variables methods and regression discontinuity designs, differences-in-differences estimation, and regress with time series data. Develops the skills needed to conduct — and critique — empirical studies in economics and related fields. Empirical applications are drawn from published examples and frontier research. Familiarity with statistical programming languages is helpful. Students taking graduate version complete an empirical project leading to a short paper. No listeners. Limited to 70 total for versions meeting together.

*A. Mikusheva, J. Angrist***14.33 Research and Communication in Economics: Topics, Methods, and Implementation**

Prereq: 14.32 and (14.01 or 14.02)

U (Fall, Spring)

3-4-5 units. HASS-S

Exposes students to the process of conducting independent research in empirical economics and effectively communicating the results of the research. Emphasizes econometric analysis of an assigned economic question and culminates in each student choosing an original topic, performing appropriate analysis, and delivering oral and written project reports. Limited to 20 per section.

*Staff***14.35 Why Markets Fail**

Prereq: 14.04, 14.12, 14.15[J], or 14.19

U (Fall)

4-0-8 units. HASS-S

Guides students through the process of developing and communicating economic and data analysis. Discusses topics in which markets fail to provide efficient outcomes or economic opportunity. Topics include health insurance, intergenerational mobility, discrimination, climate change, and more. Instruction and practice in oral and written communication provided. Key course activities include the writing of a term paper conducting original economic analysis and an in-class slide presentation of the work. Limited to 18.

N. Hendren

14.36 Advanced Econometrics

Subject meets with 14.387

Prereq: 14.32 or permission of instructor

U (Fall)

4-0-8 units

Advanced treatment of the core empirical strategies used to answer causal questions in applied microeconomic research. Covers extensions and innovations relating to econometric applications of regression, machine learning, instrumental variables, differences-in-differences and event-study models, regression discontinuity designs, synthetic controls, and statistical inference. Students taking graduate version complete an additional assignment.

J. Angrist

14.38 Inference on Causal and Structural Parameters Using ML and AI

Subject meets with 14.388

Prereq: 14.32

U (Spring)

4-0-8 units

Provides an applied treatment of modern causal inference with high-dimensional data, focusing on empirical economic problems encountered in academic research and the tech industry. Formulates problems in the languages of structural equation modeling and potential outcomes. Presents state-of-the-art approaches for inference on causal and structural parameters, including de-biased machine learning, synthetic control methods, and reinforcement learning. Introduces tools from machine learning and deep learning developed for prediction purposes, and discusses how to adapt them to learn causal parameters. Emphasizes the applied and practical perspectives. Requires knowledge of mathematical statistics and regression analysis and programming experience in R or Python.

V. Chernozhukov

14.380 Statistical Method in Economics

Prereq: 14.32 or permission of instructor

G (Fall; first half of term)

3-0-3 units

Introduction to probability and statistics as background for advanced econometrics. Covers elements of probability theory, sampling theory, asymptotic approximations, hypothesis testing, and maximum-likelihood methods. Illustrations from economics and application of these concepts to economic problems. Limited to 40 PhD students.

A. Mikusheva, A. Rambachan

14.381 Estimation and Inference for Linear Causal and Structural Models

Prereq: 14.380 and 18.06

G (Fall; second half of term)

3-0-3 units

Explains basic econometric ideas and methods, illustrating with empirical applications. Causal inference is emphasized and examples of economic structural models are given. Topics include randomized trials, regression, including discontinuity designs and diff-in-diffs, and instrumental variables, including local average treatment effects. Basic asymptotic theory for regression is covered and robust standard errors and statistical inference methods are given. Restricted to PhD students from Courses 14 and 15. Instructor approval required for all others.

W. Newey

14.382 Econometrics

Prereq: 14.381 or permission of instructor

G (Spring)

3-0-3 units

Covers key models as well as identification and estimation methods used in modern econometrics. Presents modern ways to set up problems and do better estimation and inference than the current empirical practice. Introduces generalized method of moments and the method of M-estimators in addition to more modern versions of these methods dealing with important issues, such as weak identification. Also discusses the bootstrap. Students gain practical experience by applying the methods to real data sets. Enrollment limited.

V. Chernozhukov

14.383 High-Dimensional Econometrics (New)

Prereq: 14.382 or permission of instructor

G (Spring; second half of term)

3-0-3 units

Continuation of topics in 14.382, with specific focus on large dimensional models. Students gain practical experience by applying the methods to real data sets. Enrollment limited.

V. Chernozhukov

14.384 Time Series Analysis

Prereq: 14.382 or permission of instructor

G (Fall)

5-0-7 units

Studies theory and application of time series methods in econometrics, including spectral analysis, estimation with stationary and non-stationary processes, VARs, factor models, unit roots, cointegration, and Bayesian methods. Enrollment limited.

A. Mikusheva

14.385 Nonlinear Econometric Analysis

Prereq: 14.382 or permission of instructor

G (Fall)

5-0-7 units

Develops a full understanding of and ability to apply micro-econometric models and methods. Topics include extremum estimators, including minimum distance and simulated moments, identification, partial identification, sensitivity analysis, many weak instruments, nonlinear panel data, de-biased machine learning, discrete choice models, nonparametric estimation, quantile regression, and treatment effects. Methods are illustrated with economic applications. Enrollment limited.

*A. Abadie, W. Newey***14.386 New Econometric Methods**

Prereq: 14.382

G (Spring)

4-0-8 units

Exposes students to the frontier of econometric research. Includes fundamental topics such as empirical processes, semiparametric estimation, nonparametric instrumental variables, inference under partial identification, large-scale inference, empirical Bayes, and machine learning methods. Other topics vary from year to year, but can include empirical likelihood, weak identification, and networks.

*A. Abadie, W. Newey***14.387 Applied Econometrics**

Subject meets with 14.36

Prereq: 14.381 or permission of instructor

G (Fall)

4-0-8 units

Advanced treatment of the core empirical strategies used to answer causal questions in applied microeconomic research. Covers extensions and innovations relating to econometric applications of regression, machine learning, instrumental variables, differences-in-differences and event-study models, regression discontinuity designs, synthetic controls, and statistical inference. Students taking the graduate version complete an additional assignment.

*J. Angrist***14.388 Inference on Causal and Structural Parameters Using ML and AI**

Subject meets with 14.38

Prereq: 14.381

G (Spring)

4-0-8 units

Provides an applied treatment of modern causal inference with high-dimensional data, focusing on empirical economic problems encountered in academic research and the tech industry. Formulates problems in the languages of structural equation modeling and potential outcomes. Presents state-of-the-art approaches for inference on causal and structural parameters, including de-biased machine learning, synthetic control methods, and reinforcement learning. Introduces tools from machine learning and deep learning developed for prediction purposes, and discusses how to adapt them to learn causal parameters. Emphasizes the applied and practical perspectives. Requires knowledge of mathematical statistics and regression analysis and programming experience in R or Python.

*V. Chernozhukov***14.39 Large-Scale Decision-Making and Inference (New)**

Subject meets with 14.390

Prereq: 14.32

U (Fall)

4-0-8 units. HASS-S

Covers the use of data to guide decision-making, with a focus on data-rich and high-dimensional environments as are now commonly encountered in both academic and industry applications. Begins with an introduction to statistical decision theory, including Bayesian perspectives. Covers empirical Bayes methods, including related concepts such as false discovery rates, illustrated with economic applications. Requires knowledge of mathematical statistics and regression analysis, as well as programming experience in R or Python. Students taking the graduate version submit additional assignments.

I. Andrews

14.390 Large-Scale Decision-Making and Inference (New)

Subject meets with 14.39

Prereq: 14.320

G (Fall)

4-0-8 units

Covers the use of data to guide decision-making, with a focus on data-rich and high-dimensional environments as are now commonly encountered in both academic and industry applications. Begins with an introduction to statistical decision theory, including Bayesian perspectives. Covers empirical Bayes methods, including related concepts such as false discovery rates, illustrated with economic applications. Requires knowledge of mathematical statistics and regression analysis, as well as programming experience in R or Python. Students taking the graduate version submit additional assignments.

J. Andrews

14.391 Workshop in Economic Research

Prereq: 14.124 and 14.454

G (Fall)

2-0-10 units

Can be repeated for credit.

Develops research ability of students through intensive discussion of dissertation research as it proceeds, individual or group research projects, and critical appraisal of current reported research. Workshops divided into various fields, depending on interest and size.

Staff

14.392 Workshop in Economic Research

Prereq: 14.124 and 14.454

G (Spring)

2-0-10 units

Can be repeated for credit.

Develops research ability of students through intensive discussion of dissertation research as it proceeds, individual or group research projects, and critical appraisal of current reported research. Workshops divided into various fields, depending on interest and size.

Staff

14.399 Seminar in Data Economics and Development Policy

Prereq: Permission of instructor

G (Spring)

2-0-10 units

Group study of current topics in development policy and research. Includes student presentations and invited speakers. Restricted to DEDP MASc students.

S. Ellison

National Income and Finance

14.41 Public Finance and Public Policy

Subject meets with 14.410

Prereq: 14.01

U (Fall)

4-0-8 units. HASS-S

Explores the role of government in the economy, applying tools of basic microeconomics to answer important policy questions such as government response to global warming, school choice by K-12 students, Social Security versus private retirement savings accounts, government versus private health insurance, setting income tax rates for individuals and corporations. Students taking the graduate version complete additional assignments.

J. Gruber

14.410 Public Finance and Public Policy

Subject meets with 14.41

Prereq: 14.01

G (Fall)

4-0-8 units

Explores the role of government in the economy, applying tools of basic microeconomics to answer important policy questions such as government response to global warming, school choice by K-12 students, Social Security versus private retirement savings accounts, government versus private health insurance, setting income tax rates for individuals and corporations. Students taking the graduate version complete additional assignments.

J. Gruber

14.416[*J*] Asset Pricing

Same subject as 15.470[*J*]

Prereq: None

G (Fall)

4-0-8 units

See description under subject 15.470[*J*].

L. Schmidt, L. Mota

14.42 Environmental Policy and Economics

Subject meets with 14.420

Prereq: 14.01

U (Spring)

Not offered regularly; consult department

4-0-8 units. HASS-S

Introduces key concepts and recent advances in environmental economics, and explores their application to environmental policy questions. Topics include market efficiency and market failure, methods for valuing the benefits of environmental quality, the proper role of government in the regulation of the environment, environmental policy design, and implementation challenges. Considers international aspects of environmental policy as well, including the economics of climate change, trade and the environment, and environmental challenges in developing countries. Students taking graduate version complete additional assignments. *Consult Department Headquarters*

14.420 Environmental Policy and Economics

Subject meets with 14.42

Prereq: 14.01

G (Spring)

Not offered regularly; consult department

4-0-8 units

Introduces students to key concepts and recent advances in environmental economics, and explores their application to environmental policy questions. Topics include market efficiency and market failure, methods for valuing the benefits of environmental quality, the proper role of government in the regulation of the environment, environmental policy design and implementation challenges. Also considers international aspects of environmental policy including the economics of climate change, trade and the environment and environmental challenges in developing countries. Students taking graduate version complete additional assignments. *Consult Department Headquarters*

14.43[] Economics of Energy, Innovation, and Sustainability

Same subject as 15.0201[]

Prereq: 14.01 or 15.0111

U (Fall)

Not offered regularly; consult department

3-0-9 units. HASS-S

Credit cannot also be received for 15.020

See description under subject 15.0201[].

J. Li

14.44[] Energy Economics and Policy

Same subject as 15.037[]

Prereq: 14.01 or 15.0111

U (Spring)

4-0-8 units. HASS-S

Credit cannot also be received for 14.444[], 15.038[]

Analyzes business and public policy issues in energy markets and in the environmental markets to which they are closely tied. Examines the economic determinants of industry structure and evolution of competition among firms in these industries. Investigates successful and unsuccessful strategies for entering new markets and competing in existing markets. Industries studied include oil, natural gas, coal, electricity, and transportation. Topics include climate change and environmental policy, the role of speculation in energy markets, the political economy of energy policies, and market power and antitrust. Two team-based simulation games, representing the world oil market and a deregulated electricity market, act to cement the concepts covered in lecture. Students taking graduate version complete additional assignments. Limited to 60.

C. Knittel

14.440[] Advanced Corporate Finance

Same subject as 15.473[]

Prereq: None

G (Spring)

3-0-9 units

See description under subject 15.473[]. Primarily for doctoral students in finance, economics, and accounting.

A. Schoar, D. Thesmar, C. Palmer

*C. Knittel***14.448[] Current Topics in Finance**

Same subject as 15.474[]

Prereq: None

G (Spring)

3-0-9 units

Can be repeated for credit.

See description under subject 15.474[]. Primarily for doctoral students in accounting, economics, and finance.

*Consult J. Alton***14.449[] Current Research in Financial Economics**

Same subject as 15.475[]

Prereq: Permission of instructor

G (Fall, IAP, Spring, Summer)

3-0-3 units

Can be repeated for credit.

See description under subject 15.475[]. Restricted to doctoral students.

*Consult J. Alton***14.451 Dynamic Optimization Methods with Applications**

Prereq: 14.06 and permission of instructor

G (Fall; first half of term)

3-0-3 units

Provides an introduction to dynamic optimization methods, including discrete-time dynamic programming in non-stochastic and stochastic environments, and continuous time methods including the Pontryagin maximum principle. Applications may include the Ramsey model, irreversible investment models, and consumption choices under uncertainty. Enrollment limited.

*C. Wolf***14.452 Economic Growth**

Prereq: 14.451 and permission of instructor

G (Fall; second half of term)

3-0-3 units

Introduces the sources and modeling of economic growth and income differences across nations. Topics include an introduction to dynamic general equilibrium theory, the neoclassical growth model, overlapping generations, determinants of technological progress, endogenous growth models, measurement of technological progress, the role of human capital in economic growth, and growth in a global economy. Enrollment limited.

*D. Acemoglu***14.453 Economic Fluctuations**

Prereq: 14.452 and permission of instructor

G (Spring; first half of term)

3-0-3 units

Investigation of why aggregate economic activity fluctuates, and the role of policy in affecting fluctuations. Topics include the link between monetary policy and output, the economic cost of aggregate fluctuations, the costs and benefits of price stability, and the role of central banks. Introduction to real business cycle and new Keynesian models. Enrollment limited.

*I. Werning***14.454 Economic Crises**

Prereq: 14.453 and permission of instructor

G (Spring; second half of term)

3-0-3 units

Provides an overview of models of the business cycle caused by financial markets' frictions and shocks. Topics include credit crunch, collateral shocks, bank runs, contagion, speculative bubbles, credit booms, leverage, safe asset shortages, capital flows and sudden stops. Enrollment limited.

R. Caballero

14.461 Advanced Macroeconomics I

Prereq: 14.122 and 14.452

G (Fall)

5-0-7 units

Advanced subject in macroeconomics that seeks to bring students to the research frontier. Topics vary from year to year, covering a wide spectrum of classical and recent research. Topics may include business cycles, optimal monetary and tax policy, monetary economics, banking, and financial constraints on investment and incomplete markets.

*M. Beraja, I. Werning***14.462 Advanced Macroeconomics II**

Prereq: 14.461

G (Spring)

5-0-7 units

Topics vary from year to year. Often includes coordination failures; frictions in beliefs, such as rational inattention, higher-order uncertainty, certain forms of bounded rationality, heterogeneous beliefs, and ambiguity; implications for business cycles, asset markets, and policy; financial frictions and obstacles to trade; intermediation; liquidity; safe assets; global imbalances; financial crises; and speculation.

*Consult Department Headquarters***14.47[J] Global Energy: Politics, Markets, and Policy**

Same subject as 11.167[J], 15.2191[J], 17.399[J]

Prereq: None

U (Spring)

Not offered regularly; consult department

3-0-9 units. HASS-S

Credit cannot also be received for 11.267[J], 15.219[J]

See description under subject 15.2191[J]. Preference to juniors, seniors, and Energy Minors.

*Staff***14.471 Public Economics I**

Prereq: 14.04

G (Spring)

4-0-8 units

Theory and evidence on government taxation policy. Topics include tax incidence; optimal tax theory; the effect of taxation on labor supply and savings; taxation and corporate behavior; and tax expenditure policy.

*N. Hendren, J. Poterba, I. Werning***14.472 Public Economics II**

Prereq: 14.471

G (Fall)

3-0-9 units

Focuses on government expenditures and policies designed to correct market failures and/or redistribute resources. Key topics include theoretical and empirical analysis of insurance market failures, the optimal design of social insurance programs, and the design of redistributive programs.

*A. Finkelstein, N. Hendren***14.475 Environmental Economics**

Prereq: None

G (Spring)

4-0-8 units

Theory and evidence on environmental externalities and regulatory, tax and other government responses to problems of market failure. Topics include cost-benefit analysis; measurement of the benefits of non-market goods; evaluation of the impacts of regulation; and international environmental issues including the economics of climate change and trade and the environment.

*Consult Department Headquarters***International, Interregional, and Urban Economics****14.54 International Trade**

Subject meets with 14.540

Prereq: 14.01

U (Fall)

4-0-8 units. HASS-S

Provides an introduction to theoretical and empirical topics in international trade. Offers a brief history of globalization. Introduces the theory of comparative advantage and discusses its implications for international specialization and wage inequality. Studies the determinants and consequences of trade policy, and analyzes the consequences of immigration and foreign direct investment. Students taking graduate version complete additional assignments.

A. Costinot

14.540 International Trade

Subject meets with 14.54

Prereq: 14.01

G (Fall)

4-0-8 units

Provides an introduction to theoretical and empirical topics in international trade. Offers a brief history of globalization. Introduces the theory of comparative advantage and discusses its implications for international specialization and wage inequality. Studies the determinants and consequences of trade policy, and analyzes the consequences of immigration and foreign direct investment. Students taking graduate version complete additional assignments.

A. Costinot

14.581 International Economics I

Prereq: 14.04

G (Fall)

5-0-7 units

Covers a variety of topics, both theoretical and empirical, in international trade, international macroeconomics, and economic geography. Focuses on general equilibrium analysis in neoclassical economies. Considers why countries and regions trade, and what goods they trade; impediments to trade, and why some countries deliberately erect policy to impede; and implications of openness for growth. Also tackles normative issues, such as whether trade openness is beneficial, whether there are winners and losers from trade and, if so, how they can possibly be identified.

D. Atkin, A. Costinot, D. Donaldson

14.582 International Economics II

Prereq: 14.06

G (Spring)

5-0-7 units

Building on topics covered in 14.581, revisits a number of core questions in international trade, international macroeconomics, and economic geography in the presence of increasing returns, imperfect competition, and other distortions. Stresses their connection to both macro and micro (firm-level) data for questions related to trade policy, inequality, industrial policy, growth, and the location of economic activities. Focuses on both theoretical models, empirical findings, and the challenging task of putting those two together.

D. Atkin, A. Costinot, D. Donaldson

Labor Economics and Industrial Relations**14.64 Labor Economics and Public Policy**

Subject meets with 14.640

Prereq: 14.30 or permission of instructor

Acad Year 2024-2025: Not offered

Acad Year 2025-2026: U (Spring)

4-0-8 units. HASS-S

Provides an introduction to the labor market, how it functions, and the important role it plays in people's lives. Topics include supply and demand, minimum wages, labor market effects of social insurance and welfare programs, the collective bargaining relationship, discrimination, human capital, and unemployment. Completion of or concurrent enrollment in 14.03 or 14.04, and 14.32 recommended. Students taking graduate version complete additional assignments.

J. Angrist

14.640 Labor Economics and Public Policy

Subject meets with 14.64

Prereq: 14.300 or permission of instructor

Acad Year 2024-2025: Not offered

Acad Year 2025-2026: G (Spring)

4-0-8 units

Provides an introduction to the labor market, how it functions, and the important role it plays in people's lives. Topics include supply and demand, minimum wages, labor market effects of social insurance and welfare programs, the collective bargaining relationship, discrimination, human capital, and unemployment. Completion of or concurrent enrollment in 14.03 or 14.04, and 14.32 recommended. Students taking graduate version complete additional assignments.

J. Angrist

14.661 Labor Economics I

Subject meets with 14.661A

Prereq: 14.32 and (14.03 or 14.04)

G (Fall)

5-0-7 units

A systematic development of the theory of labor supply, labor demand, and human capital. Topics include wage and employment determination, turnover, search, immigration, unemployment, equalizing differences, and institutions in the labor market. Particular emphasis on the interaction between theoretical and empirical modeling. No listeners.

D. Acemoglu, J. Angrist, P. Pathak

14.661A Labor Economics I

Subject meets with 14.661
Prereq: 14.32 and (14.03 or 14.04)
G (Fall)
5-0-7 units

Covers the same material as 14.661 but in greater depth. Additional assignments required. Limited to economics PhD students who wish to declare a major field in labor economics.

D. Acemoglu, J. Angrist, P. Pathak

14.662 Labor Economics II

Subject meets with 14.662A
Prereq: 14.32 and (14.03 or 14.04)
G (Spring)
5-0-7 units

Theory and evidence on the determinants of earnings levels and inequality, intergenerational mobility, skill demands, imperfect competition, and employment structure. Particular focus on the determinants of worker and firm-level productivity; and the roles played by supply, demand, discrimination, institutions, information, technology, and trade in the evolving distribution of income.

D. Autor, N. Roussille

14.662A Labor Economics II

Subject meets with 14.662
Prereq: 14.32 and (14.03 or 14.04)
G (Spring)
5-0-7 units

Covers the same material as 14.662 but in greater depth. Additional assignments required. Limited to economics PhD students who wish to declare a major field in labor economics.

D. Autor, N. Roussille

Economic History**14.70[J] Medieval Economic History in Comparative Perspective**

Same subject as 21H.134[J]
Prereq: None
U (Spring)
3-0-9 units. HASS-S; CI-H

See description under subject 21H.134[J].

A. McCants

Economic Development**14.73 The Challenge of World Poverty**

Prereq: None
U (Fall)
4-0-8 units. HASS-S; CI-H

Designed for students who are interested in the challenge posed by massive and persistent world poverty. Examines extreme poverty over time to see if it is no longer a threat, why some countries grow fast and others fall further behind, if growth or foreign aid help the poor, what we can do about corruption, if markets or NGOs should be left to deal with poverty, where to intervene, and how to deal with the disease burden and improve schools.

E. Duflo, F. Schilbach

14.74 Foundations of Development Policy

Subject meets with 14.740
Prereq: 14.01
U (Fall)
Not offered regularly; consult department
4-0-8 units. HASS-S

Explores the foundations of policy making in developing countries, with the goal of spelling out various policy options and quantifying the trade-offs between them. Topics include education, health, fertility, adoption of technological innovations, financial markets (credit, savings, and insurance), markets for land and labor, political factors, and international considerations (aid, trade, and multinational firms). Some basic familiarity with probability and/or statistics is useful for this class. Students taking graduate version complete additional assignments.

Consult Department Headquarters

14.740 Foundations of Development Policy

Subject meets with 14.74
Prereq: 14.01
G (Fall)
Not offered regularly; consult department
4-0-8 units

Explores the foundations of policy making in developing countries, with the goal of spelling out various policy options and quantifying the trade-offs between them. 14.75 Political Economy and Economic Development

Subject meets with 14.750

Prereq: 14.01

U (Spring)

4-0-8 units. HASS-S

Explores the relationship between political institutions and economic development, covering key theoretical issues as well as recent empirical evidence. Topics include corruption, voting, vote buying, the media, and war. Discusses not just what we know on these topics, but how we know it, covering how to craft a good empirical study or field experiment and how to discriminate between reliable and unreliable evidence. Some basic familiarity with probability and/or statistics is useful for this class. Students taking graduate version complete additional assignments.

*A. Banerjee, B. Olken***14.750 Political Economy and Economic Development**

Subject meets with 14.75

Prereq: 14.01

G (Spring)

4-0-8 units

Explores the relationship between political institutions and economic development, covering key theoretical issues as well as recent empirical evidence. Topics include corruption, voting, vote buying, the media, and war. Discusses not just what we know on these topics, but how we know it, covering how to craft a good empirical study or field experiment and how to discriminate between reliable and unreliable evidence. Some basic familiarity with probability and/or statistics is useful for this class. Students taking graduate version complete additional assignments.

*A. Banerjee, B. Olken***14.76 Firms, Markets, Trade and Growth**

Subject meets with 14.760

Prereq: 14.01 and (14.30 or permission of instructor)

U (Spring)

4-0-8 units. HASS-S

Examines how industrial development and international trade have brought about rapid growth and large-scale reductions in poverty for some developing countries, while globalization has simply increased inequality and brought little growth for others. Also considers why, in yet other developing countries, firms remain small-scale and have not integrated with global supply chains. Draws on both theoretical models and empirical evidence to better understand the reasons for these very different experiences and implications for policy. Students taking graduate version complete additional assignments.

*D. Atkin, D. Donaldson***14.760 Firms, Markets, Trade and Growth**

Subject meets with 14.76

Prereq: 14.01 and (14.30 or permission of instructor)

G (Spring)

4-0-8 units

Examines how industrial development and international trade have brought about rapid growth and large-scale reductions in poverty for some developing countries, while globalization has simply increased inequality and brought little growth for others. Also considers why, in yet other developing countries, firms remain small-scale and have not integrated with global supply chains. Draws on both theoretical models and empirical evidence to better understand the reasons for these very different experiences and implications for policy. Students taking graduate version complete additional assignments.

*D. Atkin, D. Donaldson***14.770 Introduction to Collective Choice and Political Economy**

Prereq: None

G (Fall)

4-0-8 units

Broad introduction to political economy. Covers topics from social choice theory to political agency models, including theories of voter turnout and comparison of political institutions.

*A. Banerjee, B. Olken, A. Wolitzky***14.771 Development Economics: Microeconomic Issues**

Prereq: 14.121 and 14.122

G (Fall)

5-0-7 units

A rigorous introduction to core micro-economic issues in economic development, focusing on both key theoretical contributions and empirical applications to understand both why some countries are poor and on how markets function differently in poor economies. Topics include human capital (education and health); labor markets; credit markets; land markets; firms; and the role of the public sector.

E. Duflo, B. Olken

14.772 Development Economics: Macroeconomics

Prereq: 14.121 and 14.451

G (Spring)

5-0-7 units

Emphasizes dynamic models of growth and development. Topics include migration, modernization, and technological change; static and dynamic models of political economy; the dynamics of income distribution and institutional change; firm structure in developing countries; development, transparency, and functioning of financial markets; privatization; and banks and credit market institutions in emerging markets. Examines innovative yet disruptive digital technologies, including blockchain, digital assets, crypto currency, distributed ledgers, and smart contracts.

D. Atkins, A. Banerjee, R. Townsend

14.773 Political Economy: Institutions and Development

Prereq: 14.121 and 14.451

G (Spring)

5-0-7 units

Economists and policymakers increasingly realize the importance of political institutions in shaping economic performance, especially in the context of understanding economic development. Work on the determinants of economic policies and institutions is in its infancy, but is growing rapidly. Subject provides an introduction to this area. Topics covered: the economic role of institutions; the effects of social conflict and class conflict on economic development; political economic determinants of macro policies; political development; theories of income distribution and distributional conflict; the efficiency effects of distributional conflict; the causes and consequences of corruption; the role of colonial history; and others. Both theoretical and empirical approaches discussed. Subject can be taken either as part of the Development Economics or the Positive Political Economy fields.

D. Acemoglu, A. Banerjee, J. Moscona

14.775 Comparing Societies (New)

Prereq: None

G (Fall)

4-0-8 units

Studies the cultural, social, and institutional foundations of societies around the world, emphasizing fundamentals and mechanisms that are outside the scope of traditional models in economics. Topics include social organization, perceptions of reality (e.g., the spiritual and meta-human world), drivers of innovation and technology diffusion, conflict, determinants of fertility and population growth, moral frameworks (e.g., views about right/wrong, fairness, equality, and community membership), religion, objectives and definitions of success, and societal equilibria. Emphasizes how research ranging from economic theory to development and policy design can benefit from an understanding of these vast differences that exist around the world. Also considers how these differences affect and are affected by culture, formal institutions, and development. Open to PhD students.

J. Moscona, N. Nunn, J. Robinson

14.78[J] Shaping the Future of Technology: From Early Agriculture to Artificial Intelligence

Same subject as 15.238[J]

Prereq: None

Acad Year 2024-2025: Not offered

Acad Year 2025-2026: U (Spring)

4-0-8 units. HASS-S; CI-H

Provides a framework for thinking about major technological transitions over the past 12,000 years as a means to explore paths to a better future. Discusses who gains or loses from innovation and who can shape the future of artificial intelligence, biotech, and other breakthroughs. Introduces major questions tackled by researchers and relevant to economic policy through faculty lectures, interactive events with prominent guests, and group work. Instruction and practice in oral and written communication provided.

D. Acemoglu, S. Johnson
